Deep Dive: The Death of the Job Architecture

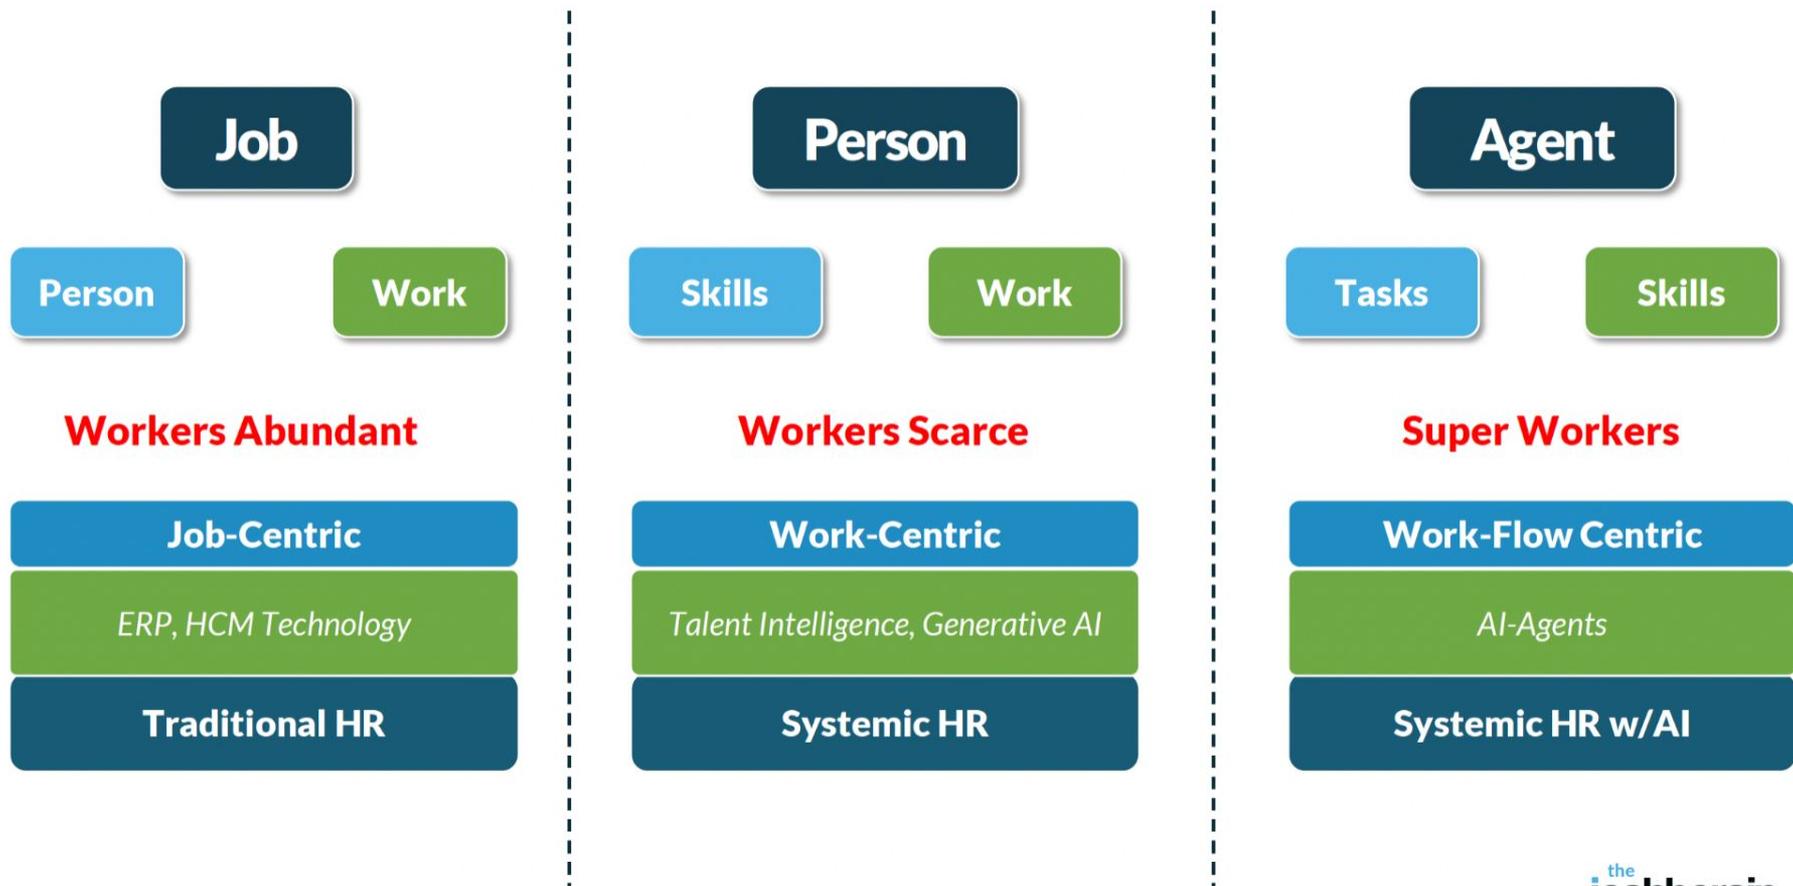

Siobhan Savage
CEO & Co-Founder

The Death of the Job Architecture

Your Toolkit for the

New World of Work

People have **Skills**

Jobs have **Tasks**

Tasks need **Skills**

AI Automates Tasks, Not Skills

Why this can't wait?

Even before AI, job architectures were already behind.
Now, we need to **completely rethink how we define work** — **and fast.**

This isn't next year's problem.
AI is already reshaping the workforce.

Every day we delay:

HR and the business
drift further apart

We build people
strategies for a
world that no longer
exists

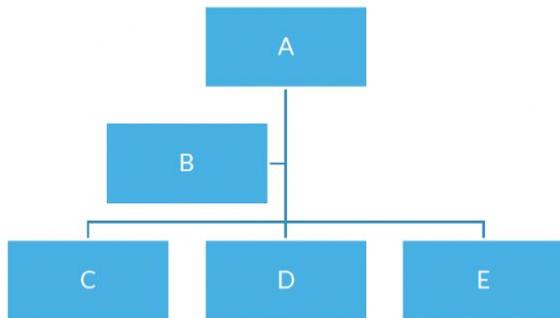

We rely on outdated
spreadsheets with
no visibility into real
work

We hire, train, and plan
for jobs that have
already changed — or
don't exist anymore

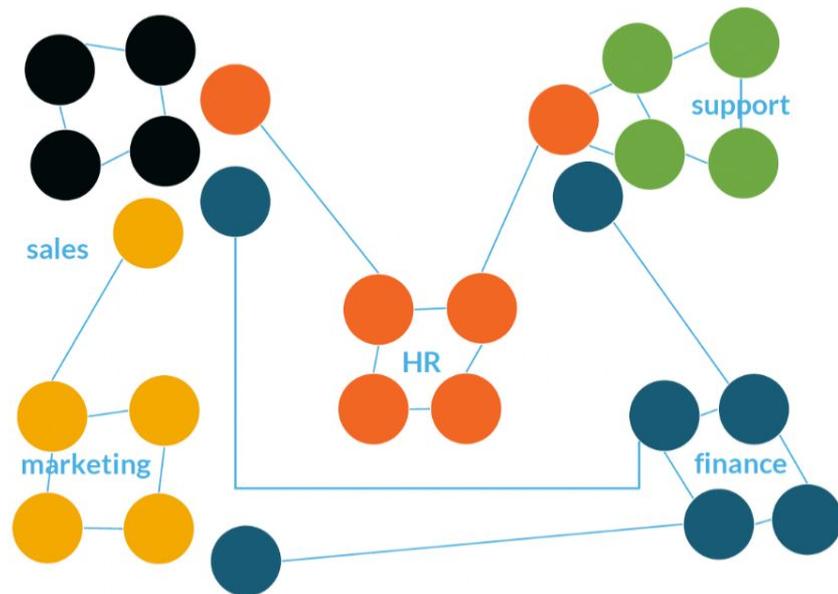

If we don't evolve now, we'll fall behind — not from lack of effort,
but from working off a structure that can't keep up.

Hierarchy by Function or Geography

Often 30-50 “job levels”

Flattened to Teams, Projects, & Agents

Moving to 6-15 or fewer “levels”

Of 1,000+ organizations studied, only **9%** use flexible HR org structures, **11%**, leverage self-directed HR teams, **12%** align teams around problems

The New Work Architecture

The Critical Infrastructure for an AI-Powered Workforce

Component (What it Needs)	Why It Matters
 Role, Role Group, Role Hierarchy & Standardization	Creates a consistent foundation across the org; supports clarity, equity, and global alignment
 Tasks & Subtasks	Brings visibility to actual work; enables AI vs human mapping, automation, and operational design
 Outcomes & Responsibilities	Clarifies what success looks like; connects roles to business impact and performance expectations
 Skills Needed for Tasks	Drives accurate hiring, learning, and mobility; links skills directly to value-creating work
 Compensation & Reward Bands	Aligns pay to real contribution; ensures fairness across evolving, AI-augmented roles
 Career Paths & Pivot Pathways	Powers mobility across roles and functions; helps people transition as work evolves

Work Architecture Powers

Mobility

Resource
Allocation

Organizational
Agility

The **Cost** of Doing Nothing

You can't lead a next-generation workforce with last-generation infrastructure.

You don't know **what work is actually happening** in your company

You're speaking a **different language** than the business, so HR strategy lacks credibility and alignment

AI automates tasks, not skills—without task-level visibility, your AI strategy fails before it starts

You hire and promote based on **outdated roles** that no longer reflect **how value is created**

You **can't see the work**, so you can't **automate, reallocate, or scale** effectively

You don't know which **skills are becoming obsolete** or what learning is actually needed

We need a new architecture for the AI-powered workforce.

Masterclass: From Job Architecture to Work Architecture

Dennis Di Lorenzo
Director of Skilling
Strategy

Micron's Skills Transformation Journey

July 16, 2025

Dennis Di Lorenzo

A Space for Reinvention

- Our team was given permission to shape the strategy from the lens of human-centered work design, thereby allowing:
 - A platform to create change
 - Top-down commitment to reimagine work and talent strategy
 - Cross-functional alignment
 - Rejection of the traditional job architecture
 - Investment in AI platforms and work data intelligence
 - A new model of work design
 - A new governance model

This shift was not just about skills—it was about redefining **how value is created through work.**

**Reinvention is
an imperative, not a
mandate**

Micron's Skills-Based Work Model

Work Design

- Dynamic structuring of work around tasks, skills, and outcomes

Capability Development

- Continuous learning aligned with business needs

AI Integration

- Predictive analytics and intelligent task orchestration

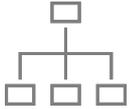

Talent Marketplace

- Internal and external mobility based on skills

A dynamic ontology that maps tasks → skills → capabilities enables real-time updates to org design and learning pathways

From Vision to Execution: The Initial 5 Workstreams

01

Rebuild the Job Architecture

Define job roles in a structured task-to-skills ontology and standardize position management.

02

Create People Competency Profiles

Develop individualized profiles that collect information on each team member's skills, strengths, and competencies.

03

Review the Learning Content Landscape

Assess the current learning offerings and evaluate them for business impact and return on investment.

04

Integrate Skills-Based Hiring Practices

Utilize skills-forward methods and assessments in sourcing, recruiting, hiring, and onboarding candidates.

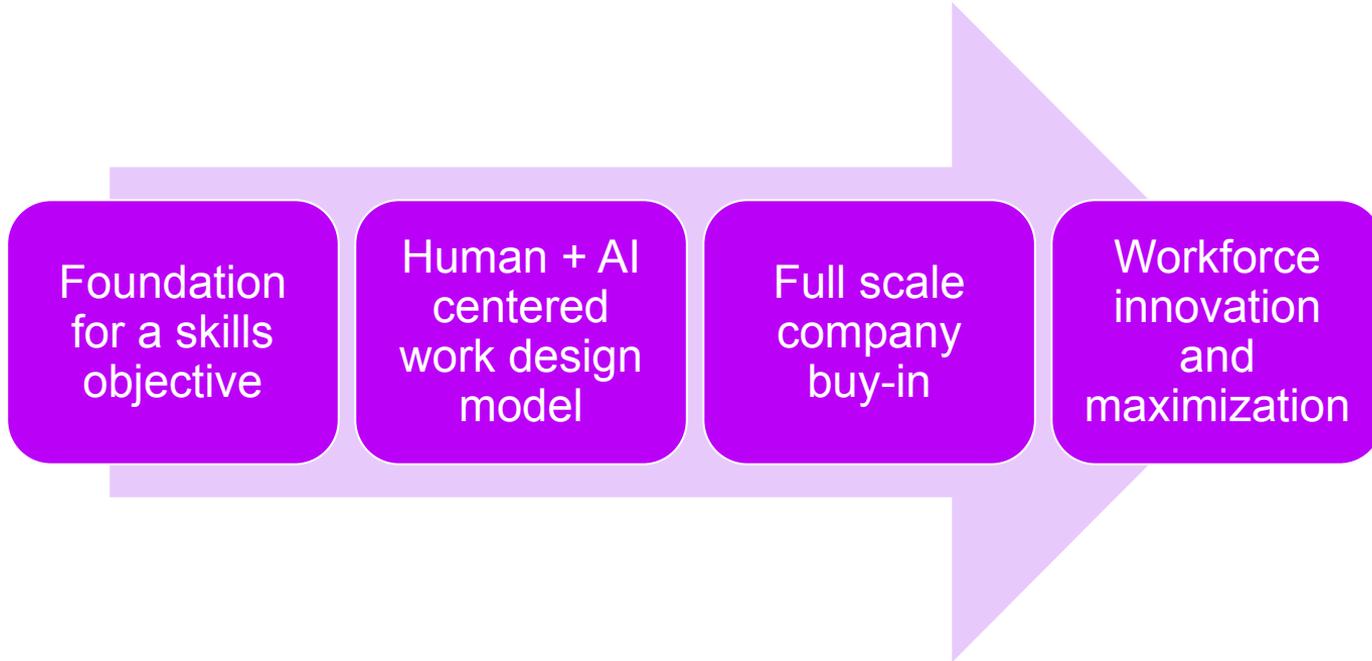

05

Pilot Skills-Based Learning

Develop and deliver skills-based curriculum in key areas of business impact.

From Unexplored to Unlocked

Getting Started

- Build a business case tied to **productivity** and **agility**
- Map **tasks**, not just skills
- Embed **transparency** and **inclusion** in the process
- Capitalize on strategy that emphasizes **business-wide impact**, not siloed programmatic efforts
- Define your **success measures**
 - E.g., faster redeployment, improved mobility, increased retention, culture of continuous learning, etc.

The
WORK
REINVENTION
Studio

Beneath the Job Title: The Great Work Reveal.

The
WORK
REINVENTION
Studio

Beneath the Job Title: The Great Work Reveal.

Your Mission

**Challenge the traditional approach to
job architecture.**

We're breaking down two job titles to uncover the real tasks your people do - and reimagining what these roles *could* be when built from the work up, not the title down.

Let the games begin!

Part 1

Step 1

Dismantle the Roles

Break down your two Jenga towers block by block. Flip each one to reveal the tasks that make up this role.

Step 2

Analyze the Work

Lay the tasks out on your Task Mapping Sheet by role, sorting by AI potential.

Use red stickers to mark duplicate tasks between the two roles.

20 mins

20:00

Part 2

Step 3

Reinvent the Roles

Use the tasks to redesign smarter roles. You can merge, split, or eliminate. Get creative.

20 mins

20:00

Role Reinvention Showdown

**Each team will have 2 minutes
to pitch their new role:**

- What your new role looks like
- What you uncovered
- What you changed
- And why it's better aligned to real work and AI opportunities

Wrapping up

- ✓ **Work can be seen, sorted, and restructured.**
- ✓ **AI opportunities emerge when tasks - not titles - are your focus.**
- ✓ **Your future workforce should be built from the task up, not the title down.**

The
WORK
REINVENTION
Studio

Playbacks & Key Takeaways

What can you ACTIVATE NOW?

These are actions within your control - tangible steps you can take immediately.

What will SHIFT THE DIAL?

These are bigger plays:

Actions, conversations, or decisions that have the potential to meaningfully move your work, your team, or your organization forward.
